

**ZyXEL NWD210N**  
**Release 2.0.0.c**  
**Release Notes**

**Date: April 21, 2010**

**Supported Platforms:**

Windows 2000, Windows XP, Windows XP 64-bit,  
Windows Vista32, Windows Vista64  
Windows7 32bit, windows7 64 bit

**Driver version:**

06/30/2009, 1.4.5.0 (xp)  
06/30/2009, 2.3.5.0 (Vista)  
09/15/2009, 3.0.7.0(Win7)

**Limitation:**

1. Under OS Vista, guest account can't use PEAP authentication.

**Known issue:**

1. The NIC cannot scan itself from site survey when setup an ad-hoc. But other can do, even connect with it. After connected, it can do also.
2. Under OS 2000,XP and XP64 ,after DUT connect to an hidden AP,in Site Survey page it cannot scan the AP's SSID,and zero config is the same
3. Under OS Vista build an adhoc profile,then connect to an AP with WPA/WPA2/WPA-PSK/WPA2-PSK encryption,it cannot connect to the AP.
4. (InstallShield)When Uninstall NWD210N do not reboot then install NWD210N again, and after next start of PC, the shortcut of uninstall will not work normally.

**Features:**

**Modification in 2.0.0.c | 04/21/2010**

**1. Driver Changed.**

N/A

**2. Utility Changed.**

2.1 [Modified] Change UI version to v2.0.0.c to be the final version and close this case

**3.Installshield Changed**

3.1 [Bug Fixed] Fixed the bug that when automatic installed utility and driver, sometimes the hardware will automatically identify the OS native driver on win7 32bit/64bit.
